IT'S EASY TO STAY SAFE ONLINE

Staying secure is not as hard as you might think

Focus on the Core 4

- By coming here, you're already most of the way there. You can start adopting these behaviors in less time than this presentation.

Let's find out what you know

Don't be scared!

You have the power to defeat cybercriminals, and getting started is easy!

Staying safe online doesn't take much time or cost money

You can begin protecting your accounts in minutes.

Know Your Core 4!

1

Use MFA when available

2

Create unique, long and complex passwords for each account, and use a password manager
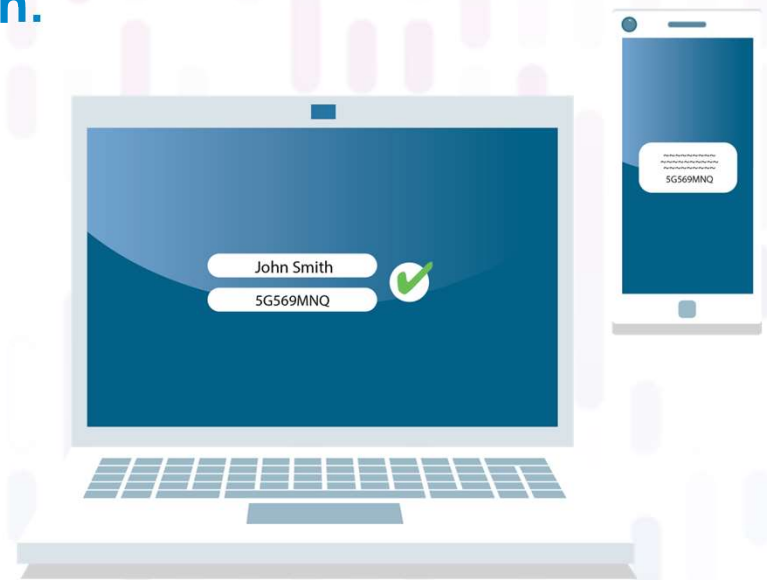

3

Update your software

4

Identify and report phishing

Use multifactor authentication

When an account requires you to provide 2 or more forms of authentication to log in.

What is a strong password?

3 Elements of Strength:

- Unique

- Long

- Complex

**If you are worried an account was compromised, change the password ASAP.**

Use a password manager!

Nowadays, you don't need to remember your passwords!

Update your software

Turn on automatic updates

Do a device audit

Every so often, get rid of apps and software you don't use

JC0   Let's talk about how this relates to "securing your home". A lot of people don't think about all the smart devices and apps they have connected in their home that they and their families use (cars, toys, appliances, etc)

Phishing: Don't take the bait

Look out for anything too good to be true, urgent, or suspicious.

- Don't click anything
  – seriously, anything.

Report phishing attempts

More ways to stay safe online

Think before you click

Check your settings

Shop safe!

Social and safe

✓ Check your settings

✓ Share with care

✓ Once shared, always there

✓ Not everyone is who they say they are

What problems do people have with adopting Core 4?

Lack of knowledge

Takes too much time

You got nothing to hide

Be wary of Public Wifi

Don't log into key accounts

Better yet, use a VPN or personal hot spot

How fast can you do the Core 4?

1

Put MFA on your key accounts (devices, email, banking, social media, work)

2

Download a password manager and strengthen your passwords

3

Set up devices/apps/ software to install automatic updates

4

Reject the phishing bait

Start small!

You don't have to do everything at once

You have the power to stay safe online!

There is no reason to be scared!
